

CODEPEN

CodePen is an online community for testing and showcasing user-created **HTML, CSS and JavaScript** code snippets. It functions as an online code editor and open-source learning environment, where developers can create code snippets, called "pens," and test them.

You might say the Pen Editor is the most important page on CodePen! This is the place you actually write the code to make Pens. The standard editor is HTML, CSS, and JavaScript.

The Big Idea

You write code in the editors, the results of that code are shown to you in the preview area. It's simple, but powerful! Beginners and experts alike work best when they can see the results of what they are doing as they do it.

How do you make a Pen?

You must have an account and be logged in, then you head to the Pen Editor, and save it when you are ready.

How do I save changes?

After the first save, changes you make in the Pen Editor are automatically saved on a timer, but that is a Pen-level setting you can change if you wish. You can also fork a Pen to make another copy.
